

# HIGH PERFORMANCE GAS GENERATORS

## Description

Our lines of gas generators have been designed to fit most applications in the field of automotive industry, air quality monitoring and laboratory.

Each instrument is equipped with high performance communication interfaces (RS485, Ethernet and WLAN (Options)) allowing to realise very flexible gas networks with either local or central control.

The control software handles all safety functions, the automatic pressure regulation, functioning status and ensures reliable communications.

All gas generators modules are easy to install, reliable, safe and pleasant to operate.

### Technologies involved:

- Proton Exchange Membrane (PEM)
- Pressure Swing Absorption (PSA)
- Catalysis

## Benefits

- Reduces operating costs.  
Return on investment in less than 2 years.
- Improves resolution and detection limit of your instrument. Provides high pressure stability.
- Provides H<sub>2</sub>, N<sub>2</sub> and Air 24/7 at constant purity. No contamination.
- No more handling and storage of gas cylinders. No more rental fees.
- Can be stacked for low footprint gas generator network assembly (laboratory).
- Can be controlled remotely by either a PC, iPad, iPhone or iPod touch.
- Internal maintenance free.

### H<sub>2</sub>:

- Very safe operation, internal leak-test, automatic shut-down, over-pressure valve, current and voltage limits.

### Air and N<sub>2</sub>:

- Very safe operation, internal leak-test, automatic shut-down, protection against over-temperature.
